Ports of Mystara

By Bruce Heard, updated 5/14/2012
Maps by Thorfinn Tait & John Calvin

The "Savage Coast of Turan," from *Age of Conan Unchained*

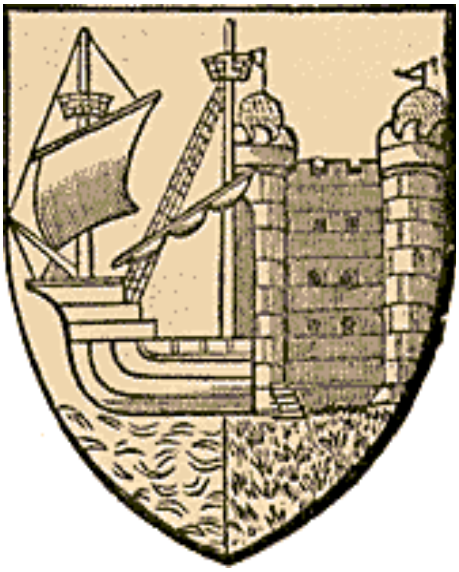
Here's another file I dug up, written some thirteen years ago. It describes a system to rate ports. There are four separate categories, all of which are expressed in Hull Points:

- Total Capacity
- Dock Size
- Clearance
- Traffic

1. Total Capacity

Size	Combined HP	Class
Huge	10,000+	A
Very Large	5,000-9,999	B
Large	2,000-4,999	C
Average	1,000-1,999	D
Small	500-999	E
Very Small	up to 499	F

Capacity expresses the total number of HP that may be moored at the docks or anchored within the port's harbor. Class rating is just an abbreviation. Ports rated C or better are often fortified and offer stone docks. D or smaller have wooden piers. Dry dock capacity equals 1/10th the total capacity, and only in ports D or bigger.



2. Dock Size

Size	Single Ship HP	Rank
Very Large	181+	1
Large	180	2
Spacious	160	3
Average	140	4
Limited	120	5
Small	80	6
None	n/a	7

Dock size tells how large a vessel the port's docks may accommodate. Ships that are too large for the docks must anchor in the harbor. For simplicity, it is assumed there's enough dock space to accommodate all ships of the appropriate size.

3. Clearance

Depth	Single Ship HP	Grade
Very Deep	181+	I
Deep	180	II
Fairly Deep	160	III
Average	140	IV
Shallow	120	V
V. Shallow	80	VI
Hazardous	up to 20	VII

Clearance indicates how deep the harbor's water are, and thus how large a ship may anchor there. For riverine ports, this also indicates the river or channel's depth.

4. Traffic

Port Size	Percentile Roll	Port Fee
Huge	80%	5 sp
Very Large	75%	4 sp
Large	70%	3 sp
Average	65%	2 sp
Small	60%	1 sp
Very Small	55%	5 cp

Traffic shows how busy a port may be on a given day. A port is full if the % check exceeds the listed capacity. Daily Port Fees are given *per Hull Point*. If a % check failed by 20 or more, double the fee. Halve it if the ship anchors in the harbor without using a dock. Tax on merchandise is 5-10% of local estimated value (smallest ports being cheapest.)

Winds and Sea Currents: generally winds and sea currents near the equator flow westward. North and south from the equator, they flow eastward. The *Izondian Deep, Yalu Bay, Gulf of Hule*, *Sea of Dread*, *Bay of Thorin,* and the *Bellissarian Sea* all flow roughly clockwise. Currents are more complicated around Alphatia and Bellissaria, although winds still blow from the west predominantly. This contradicts PWA1 map in a few places, especially west of the *Serpent Peninsula* and south of the *Isle of Dawn*.

Ship Comparisons for the AD&D Game

I'll be adding this as an appendix in *Ports of Mystara* (see previous post).

AD&D Ships✶	Hull Values	BECMI Ships	Hull Points
		Raft	5◇
		Canoe	6-10
Row Boat	1-4	Lifeboat	10-20
		Boat, River	20-40
		Sailing Boat	20-40
Barge, sm.	1-6		
Barge, lg.	2-8		
		Longship*	60-80
Galley, sm.	2-12	Galley, sm.*	80-100
Galley, lg.	4-16	Galley, lg.*	100-120
		Galley, War	120-150
Merchant, sm.	6-36	Sailing Ship sm.	60-90
Merchant, lg.	12-48	Sailing Ship, lg.	120-180
Warship	7-42	Troop Transport	160-220

✶ *1st Edition Rules*

Ships from the Gazetteers	
Ierendi *Fireship*	200
Minrothad *Harbortown*	170
Minrothad *Schooner*	80
Minrothad *Clipper*	100
Orcish *War Raft**	10-20◇

◇ Raft Hull Points are per 100 sq. ft. section (100x100). The sheer size of a War Raft may prevent it entirely from entering a harbor. It if actually can, double its HP as regards dock size needed. If its *modified* HP rating is more than 180, assume the raft cannot fit between the piers.

(*) Notes About Port Clearance

- Reduce longship's draft 50%, so a longship with 80HP has the draft of a 40 HP vessel.
- Reduce small or large galley's draft by 20HP, so a small galley with 80 HP has the draft of a 60 HP vessel.
- Reduce the draft of a raft 90%, so a ramshackle contraption with 100 HP would have the draft of a 10 HP vessel (but it would require as much dock space as a troop transport).
